### About Dynamite

Dynamite was originally made of a material like sawdust which was soaked in nitroglycerin or other explosive material. It was then wrapped into sticks approximately 8 inches long with a diameter of 1.25 inches. Early forms of dynamite were unstable and had a one year shelf life (if stored properly). Today, different formulas are used to make it more stable.

Dynamite can be ignited several ways: heat, flame, or shock. Flame ignited dynamite typically results from a burning wick. The length of the wick determines how long it will take to detonate. Shock detonation requires a blasting box and wire.

FYI: TNT and dynamite are not the same. TNT uses trinitrotoluene, not nitroglycerin.

**Length:** 8 inches not including wick

### DYNAMITE INSTRUCTIONS

*(make as many as desired for the explosion desired)*

Hook: F

Red

- Ch 2**
- Rnd 1:** 8 sc in second ch from hook. (8)
- Rnd 2:** Sc inc around. (16)
- Rnd 3:** Sc in back loops only around. (16)
- Rnd 4-36:** Working in both loops, sc around. (16)
- Rnd 37:** Sc in front loops only around. Sl st in next st to finish off. Cut yarn; weave in end. (16)

### Dynamite Top

Black

- Ch 2**
- Rnd 1:** 8 sc in second ch from hook. Finish off. Cut yarn leaving a long tail for sewing. (8)
- Sew dynamite top to the unused loops of rnd 37 of the dynamite. Keep in mind there are eight stitches on the dynamite end (black) and 16 stitches on the dynamite (red).

### Wick

Attach white yarn to the center of the top of the dynamite in the black area.

- Ch 25** (or as long as desired for the wick)
- For a wick that looks on fire already, cut a three inch piece of red, yellow, and orange. Hook them all to the end or tie them on the end with a knot (like tying a shoe). Trim to desired length.
